L'esperienza al servizio dell'innovazione

IT

Dal 1955 il Gruppo Varvel progetta e realizza sistemi di trasmissione di potenza impiegati in numerosi settori dell'industria. "Know-how to do it": Varvel ha le competenze per soddisfare al meglio le richieste dei clienti. Grazie alla grande esperienza maturata in oltre sessant'anni, Varvel offre alla clientela un'ampia gamma di soluzioni standard e prodotti personalizzati per esigenze specifiche. L'intera gamma di prodotti Varvel è progettata e realizzata in Italia, ma il Gruppo è presente in tutto il mondo con due filiali (una in USA e l'altra in India) e una rete globale con oltre 100 partner commerciali.

Experience at the service of innovation

EN

The Varvel Group has been designing and producing power transmission systems for numerous areas of industry since 1955. "Know-how to do it": Varvel has the know-how needed to satisfy customers' requests in the best way possible. Thanks to over sixty years of accumulated experience, Varvel can offer customers a vast range of standard solutions and customise products for specific needs. The entire product range is designed and made in Italy and sold worldwide through two subsidiaries (in the USA and India) and a global network of over 100 commercial partners.

Erfahrung im Dienste der Innovation

DE

Die Varvel-Gruppe entwickelt und produziert seit 1955 Kraftübertragungssysteme für viele Industriezweige. "Know-how to do it": Varvel verfügt über das Know-how, um die Anforderungen der Kunden bestmöglich zu erfüllen. Dank der in über sechzig Jahren Firmenaktivität gesammelten Erfahrung kann Varvel seinen Kunden eine breite Palette von Standardlösungen und maßgeschneiderten Produkten für alle spezifischen Anforderungen bieten. Die gesamte Varvel-Produktpalette wird in Italien entwickelt und hergestellt; darüber hinaus ist die Gruppe aber auch weltweit mit zwei Tochtergesellschaften (die eine in den USA und die andere in Indien) und einem globalen Netzwerk mit über 100 Geschäftspartnern präsent.

RS, RT - Vite senza fine a singolo stadio

I riduttori della serie RS-RT sono costruiti con carcassa e coperchi in alluminio presso fuso fino alla grandezza 85 e in ghisa dalla grandezza 110.

Le coppie indicate nelle tabelle di selezione sono coppie di uscita relative alla grandezza considerata e le potenze sono riferite a 1440 rpm.

I paraolio entrata montati su richiesta in Viton per azionamenti con motori a 2 poli o motori c.c. a 3000 rpm oppure in Silicone per applicazioni a basse temperature.

I riduttori sono spediti già riempiti con lubrificante sintetico a lunga durata (senza tappi), nelle quantità indicate a pag. 17 e valide per qualunque posizione di funzionamento.

I valori delle tabelle di selezione sono intesi per fattore di servizio FS1.0, vale a dire con funzionamento di 8-10 ore al giorno, con carico uniforme, avviamenti inferiori a 6 all'ora e temperatura ambiente fra 15 e 35 °C.

RA, TA - Vite senza fine con precoppia

I riduttori della serie RA-TA, composti da un riduttore FXA indipendente a una coppia di ingranaggi montato su un riduttore standard del tipo FRS o FRT, forniscono una maggior coppia di uscita ed un più elevato rendimento degli equivalenti rapporti del tipo RS-RT.

RS/RS, RT/RT - Vite senza fine doppio stadio

I riduttori della serie RS/RS o RT/RT sono composti di due riduttori della serie RS o RT e forniscono un'ampia scelta di elevati rapporti a completamento della serie RA-TA per ottenere rotazioni alle più basse velocità.

RS, RT - Single-stage worm gear boxes

The worm gearboxes, RS and RT series, specifically designed for universal mounting, are manufactured with aluminium die cast housings and covers up to size 85 and cast iron from the 110.

Torques listed in selection tables are output torque values and motor powers are always referred to 1440 rpm.

On request, input Viton oil seals allow trouble-free operation with 2-pole standard AC, brushless or 3000 rpm DC motors and Silicone oil seals are recommended for low temperatures.

Gearboxes are delivered filled with synthetic long-life oil (without plugs), see filling quantities at page 17, and valid for all mounting positions.

Selection table data are intended for service factor SF1.0, i.e. 8-10 running hours per day, uniform load, less than 6 start/ stops per hour, and room temperature ranging from 15 to 35 °C.

RA, TA - Helical/worm gear boxes

The helical/worm gearboxes, RA and TA series, made of an independent single stage helical gearbox FXA fitted to a standard FRS or FTR gearbox, allow greater output torques and higher efficiency than the FRS and FRT gearbox with equivalent ratios.

RS/RS, RT/RT - Two-stage worm gear boxes

The gearboxes, RS/RS and RT/RT series, are made of two gearboxes RS or RT and offer a full selection of high reduction ratios to obtain low output speeds and high output torques.

RS, RT - Einstufige Schneckengetriebe

Die Getriebe der Serien RS u. RT, eigens für die universelle Montageanordnung entwickelt, haben bis zur Baugröße 85 Gehäuse und Deckel aus Aluminium-Druckguß und aus Guß bei Baugröße 110.

Die in den Auswahltabellen genannten Drehmomente sind jeweils die Ausgangsdrehmomente der entsprechenden Baugröße, und die Leistungen beziehen sich auf eine Nenndrehzahl von 1440 UpM.

Wellendichtringe aus Viton, auf Anfrage auf der Eingangsseite montiert, ermöglichen einen problemlosen Einsatz von 2-poligen Motoren oder Gleichstrommotoren bis 3000 UpM im Dauerbetrieb.

Die Getriebe werden ausgeliefert mit Langzeitschmiermittelfüllung (ohne zusätzliche Verschlußschrauben) und sind für alle Montagepositionen ausreichend befüllt.

Die Tabellenwerte berücksichtigen einen Betriebsfaktor von FS 1.0, d.h. Betrieb 8-10 Stunden/Tag, gleichmäßige Belastung, weniger als 6 Schaltvorgängen (Start u. Halt) je Stunde und Umgebungstemperaturen zwischen 15 und 35 °C.

RA, TA - Schneckengetriebe mit Stirnradvorstufe

Die Getriebe der Serien RA u. TA, bestehen aus einer Kombination eines separaten einstufigen Stirnradgetriebes FXA, mit einem Standard FRS oder FRT Schneckengetriebe und erlauben ein größeres Abtriebsdrehmoment bei besserem Wirkungsgrad als einstufige FRS- u. FRT-Schneckengetriebe mit gleicher Übersetzung.

RS/RS, RT/RT - Doppelstufige Schneckengetriebe

Die Getriebe der Serie RS/RS u. RT/RT sind eine Kombination zweier Schneckengetriebe der RS oder RT Baureihe und bieten eine weitgehende Auswahlmöglichkeit an hohen Untersetzungen und somit sehr kleinen Abtriebsdrehzahlen.

RS

RT

AS, AD - Albero di uscita

Tutti i tipi di riduttori sono normalmente costruiti con albero uscita cavo e, a richiesta, l'albero lento sporgente in acciaio C43 può essere fornito semplice AS o doppio AD. Su richiesta è disponibile una protezione di sicurezza ASC dell'estremità non utilizzata dell'albero AS.

BR, BT - Braccio di reazione

I riduttori standard sono forniti normalmente su entrambi i lati con coperchi che permettono il fissaggio del braccio di reazione, quando essi debbono funzionare come riduttori pendolari. Il braccio reazione BR-BT o BRV-BTV (con boccola antivibrante in Vulkollan) è costruito in lamiera ad elevato spessore e zincato bianco.

TLI/TLE - Limitatore di coppia

Il dispositivo limitatore di coppia - TLI realizzato all'interno del riduttore e TLE installabile esternamente - permette la regolazione della coppia trasmissibile, la protezione del motoriduttore in caso d'ostacolo accidentale, il semplice sblocco del sistema e la manovra manuale in caso di mancanza di corrente. Il valore della coppia di slittamento, tarato in fabbrica, è regolabile in diminuzione dal valore di coppia massima a zero e la rotazione dell'albero di uscita riprende quando la coppia ridiscende al disotto del valore prefissato. Le quantità d'olio del limitatore TLI sono riportate a pagina 48 e 56.

SL - Limitatore di giri

Il dispositivo SL arresta - per mezzo di fine corsa interni - il funzionamento del motoriduttore dopo un tempo prefissato. La filettatura standard permette circa 40 giri dell'albero di uscita. L'escursione dei fine corsa è regolabile e il tempo di funzionamento varia da 12 a 170 secondi in relazione al rapporto utilizzato.

AS, AD - Output shafts

All gearboxes are manufactured with hollow output shaft as standard. Optionally, a single AS or double AD solid output shaft - made of steel C43 - can be supplied. An ASC safety shield for the opposite side of a single output shaft AS, is available on demand.

BR, BT - Torque arms

Standard gearboxes are normally supplied with covers on each side to allow the torque arm fixing when gearboxes have to operate as shaft mounted units. The torque arm, standard or with Vulkollan vibration damping, is made of extra thick plate and white galvanized.

TLI/TLE - Torque limiters

The torque limiter and safeguard device - TLI built-in inside the gearbox and TLE fitted outside - allows easy torque adjustments, full gearbox safeguard against unexpected overload conditions, simple hand release, and manual operation in case of power supply failure. The factory preset slipping torque can be adjusted from the maximum preset torque down to zero. Shaft rotation restarts automatically as soon as torque value is lower than the preset value. Oil quantity of torque limiters TLI are listed on page 48 and 56

SL - Travel limiters

The SL travel limiter device stops - by means of built-in limit switches - the gearbox after a given operation time. Standard thread allows approx. 40 turns of the output shaft. Limit switch travel is adjustable and operation time varies upon the used reduction ratio from min. 12 to max. 170 seconds.

AS, AD - Ausgangswelle

Alle Getriebe werden in Hohlwellen-Ausführung hergestellt. Als Zubehör können Einsteckwellen in der Version AS als einseitige Welle oder AD als beidseitige Welle geliefert werden. Diese Einsteckwellen sind aus C43 Stahl gefertigt. Auf Anfrage ist auch ein Wellenschutz ASC als Abdeckung eines Hohlwellenendes lieferbar.

BR, BT - Drehmomentstütze

Die Getriebe werden normalerweise mit Deckeln auf beiden Abtriebsseiten geliefert, die Bohrungen und Zentrierung für die Befestigung einer Drehmomentstütze besitzen, wenn das Getriebe in der Aufsteckversion eingesetzt wird. Die Drehmomentstütze, Standard oder mit Dämpfungsbuchse aus Vulkollan, ist aus starkem verzinkten Blech hergestellt.

TLI/TLE - Drehmomentbegrenzer

Die TL Einrichtung ermöglicht die Einstellung der übertragbaren Drehmomente, die Absicherung vom Getriebe gegen Spitzenbelastungen, die einfache Ausschaltung der Antriebseinheit und die manuelle Bedienung im Falle eines Stromausfalls. Das Rutschmoment ist vom max. Einstellmoment bis zum Nullwert einstellbar und die Drehbewegung der Abtriebswelle setzt wieder ein, sobald das Drehmoment wieder kleiner als das eingestellte Moment wird. Ölmenge: Seite 48 u. 56

SL - Drehzahlbegrenzer

Die SL-Einrichtung stoppt, mittels eingebauten Wegschalter, das Getriebe nach einer bestimmten Zeit. Die Standardgewindespindel, ermöglicht ca. 40 Umdrehungen der Ausgangswelle. Die Wegschalter sind einstellbar und die Betriebszeit ist, abhängig von der Untersezung, zwischen min. 12" bis max. 170".

A) Semi-giunto riduttore

- Materiale: acciaio
- Integrale con albero entrata
- Supportato con due cuscinetti
- Dimensioni lato entrata invariate

B) Anello elastico

- Denti: collegati esternamente
- Materiale: Elastomero Termoplastico IXEF® - Polyarylamide
- Durezza 90 Shore D
- Temperatura -30/+135° C (-22/+275°F)

C) Semi-giunto motore

- Materiale: Alluminio pressofuso (G3, G5, G6) Acciaio (GS3, GS5, GS6, GS8)
- Bilanciatura dinamica
- Calettamento: Morsetto (G3, G5, G6) Chiavetta (GS3, GS5, GS6, GS8)
- Fori disponibili secondo: IEC 72 / DIN42948 NEMA C e TC

Vantaggi:

- Un solo riduttore per rapporto di riduzione
- Maggiore flessibilità
- Aumentata rotazione dello stock
- Eliminazione sfregamento fra chiavetta e cava (tribocorrosione)
- Collegamento riduttore / motore con gioco zero
- Disallineamento angolare ammesso max. 1°
- Elevata rigidità torsionale
- Elevato smorzamento delle vibrazioni

Flange entrata:

- Materiale: Alluminio fino IEC112 e NEMA TC180 Ghisa da IEC 132 e NEMA TC200

A) Reducer-side coupling hub

- Material: steel
- One piece machined on input shaft
- Two bearing setting
- Unchanged casing dimensions

B) Spider

- External tooth connection
- Material: Thermoplastic Elastomer: IXEF® - Polyarylamide
- Hardness 90 Shore D
- Temperature -30/+135° C (-22/+275°F)

C) Motor-side coupling hub

- Material: Aluminium pressure die cast (G3, G5, G6) Steel (GS3, GS5, GS6, GS8)
- Dynamic balancing
- Fitting: Clamp (G3, G5, G6) Key (GS3, GS5, GS6, GS8)
- Bores, available according to: IEC 72 / DIN42948 NEMA C and TC

Advantages:

- One gearbox only for each reduction ratio
- Greater flexibility
- Increased stock rotation
- Elimination of fretting corrosion between key and keyway
- Gearbox / motor connection with zero backlash
- Allowed angular misalignment 1° max.
- High torsional rigidity
- High vibration damping

Input flanges:

- Material: Aluminium up to IEC112 & NEMA TC180 Cast iron from IEC 132 & NEMA TC200

A) Getriebekupplungshäfte

- Material: Stahl
- integrierte Eingangswelle
- Zwei-Lager-Anordnung
- unveränderte Eingang Abmessungen

B) Kupplungsscheibe

- Äußerliche Zahnverbindung
- Material Thermoplastisch Elastomer: IXEF® - Polyarylamide
- Härte 90 Shore D
- Temperatur -30/+135° C (-22/+275°F)

C) Motorkupplungshäfte

- Material: Aluminium Druckguss (G3, G5, G6) Stahl (GS3, GS5, GS6, GS8)
- dynamische Auswuchtung
- Verkeilung: Klammer (G3, G5, G6) Keil (GS3, GS5, GS6, GS8)
- Bohrungen, nach: IEC 72 / DIN42948 NEMA C u. TC

Vorzüge:

- nur eine Getriebekomponente je Übersetzung
- gesteigerte Flexibilität
- höher Lagerumschlag
- Vermeidung von Passungsost zwischen Keil u. Keil Einschnitt
- Getriebe / Motor Spielfrei Verkeilung
- erlaubt Winkelausgleich bis 1°
- hohe Verdrehsteifigkeit
- hohe Dämpfung von Schwingungen

Eingangsflansche:

- Material: Aluminium bis IEC112 u. NEMA C180 Grauguss ab IEC 132 u. NEMA C200

 GRM - spielarme Montage
 LNS - Sonderschmierung
 VB - Schneckenwelle beidseitig

Modularità e la flessibilità

hanno guidato il progetto dei prodotti VARVEL fino dagli anni 2000: così, la disponibilità di riduttori in kit ha permesso il montaggio in pochi minuti utilizzando una normale attrezzatura.

Questo permette la massima flessibilità ai distributori e rivenditori VARVEL che, grazie ad un numero limitato di elementi, possono configurare all'istante il prodotto richiesto dai clienti.

Il programma di selezione **VARsize®** disponibile nel sito web

www.varvel.com

permette un facile dimensionamento dei prodotti VARVEL.

Disegni 2D/3D

Tramite configurazione assistita si generano modelli 3D e disegni 2D nei formati CAD più diffusi.

Configurazione assistita

Identifica, fra tutte le serie, i riduttori che sono adeguati per soddisfare i parametri di funzionamento richiesti (potenza, coppia, velocità, fattore di servizio, ecc.). Definita la grandezza del riduttore, un documento è generato dai dati della richiesta, così come il disegno dimensionale PDF, il modello 3D e il disegno 2D.

Modularity and flexibility

have been leading the design of VARVEL products since the years 2000: this way, the gearbox-kit concept was carried out allowing anyone to assemble the unit in few minutes with standard tooling.

This feature provides the highest flexibility to VARVEL's distributors and resellers who - thanks to a limited kit selection - are able to immediately configure the required product.

VARsize® selection program, available from our web-site

www.varvel.com

allows a friendly sizing of VARVEL product range.

2D/3D Drawings

A guided selection lets 2D/3D models downloaded for the most popular CAD systems.

Guided selection

This option returns a list of applicable product configurations upon a given sequence of application parameters (power, output torque, rpm, service factor etc.); a PDF data sheet featuring performance data and dimensional drawings is generated for each configuration, as well as the 3D model and 2D drawings.

Bausteinprinzip und Flexibilität

bestimmen die Gestaltung der VARVEL Produkte seit 2000. Dieses Konzept ermöglicht jedermann in kurzer Zeit mit Standardwerkzeugen das gewünschte Getriebe zu montieren.

Damit wird allen Verkäufern von VARVEL Antrieb ein Höchstmaß an Flexibilität gegeben, um mit wenigen Bauteilen ein gewünschtes Getriebe zu konfigurieren.

VARsize® als Auswahlprogramm auf unserer Internetseite

www.varvel.com

bietet eine angepasste Antriebsauslegung.

2D/3D-Zeichnungen

Die unterstützte Auswahl bietet die Möglichkeit 2D/3D Modelle für die gängigen CAD Systeme zu laden.

Unterstützte Auswahl

Mit diesem Dienst wird eine Liste möglicher Produktvarianten erzeugt, bestimmt durch Parameter (Leistung, Moment, Drehzahl, Betriebsfaktor usw.); ein PDF Datenblatt mit Leistungsdaten und Maßbild ist für jede dieser Konfigurationen verfügbar, ebenso wie 3D Modelle und 2D Zeichnungen.

FATTORE DI SERVIZIO - SERVICE FACTOR - BETRIEBSFAKTOR
del riduttore of the gearbox des Getriebes

Il fattore di servizio FS1.0 è inteso come rappresentativo di un funzionamento di 8-10 ore al giorno, con carico uniforme e avviamenti inferiori a 6 all'ora e temperatura ambiente fra 15 e 35 °C.

Il rapporto fra la coppia massima di uscita M_2 del gruppo e la coppia richiesta dalla applicazione $M_{(app)}$ determina il Fattore di Utilizzo del gruppo che deve essere uguale o superiore al fattore di servizio SF.

Per temperatura massima ambiente maggiore di 40 °C oppure minore di 0 °C interpellare il Servizio pre-vendita.

Per altre condizioni di servizio, i fattori appropriati delle due tabelle dovranno essere moltiplicati.

Service factor FS1.0 is meant as typical of 8-10 hours/day operation, with uniform load and starts/ stops lower than 6 per hour and ambient temperature between 15 and 35 Celsius.

The ratio between the drive's maximum output torque M_2 and application torque $M_{(app)}$ defines the drive's Duty Factor that must be equal or bigger than the Service Factor SF.

For max. ambient temperature exceeding 40 °C or below 0 °C, please ask our Pre-sales Service.

Should other operation conditions occur, the service factors of the two tables have to be multiplied.

Für den Servicefaktor FS1.0 gilt ein 8- bis 10-stündiger Betrieb mit gleichförmiger Last und bis zu 6 Start/Stopps je Stunde und Umgebungstemperaturen zwischen 15° und 35 °C.

Das Verhältnis zwischen dem maximalen Ausgangsdrehmoment des Getriebes M_2 und des erfragtem Drehmoment der Anwendung $M_{(app)}$, bestimmt den Ausnutzungsfaktor der Gruppe, der gleich oder größer als der Betriebsfaktor SF sein muss.

Für max. Umgebungstemperatur über 40° C oder unter 0° C, fragen Sie bitte unseren Vorverkauf Kundenservice.

Für andere Betriebsbedingungen müssen die folgenden Faktoren entsprechend multipliziert werden.

Fattore di Servizio - Service Factor - Betriebsfaktor
SF

Tipo di Carico Charge Type Belastung-Typ				Avviamenti / Ora Start-Stops per Hour Schaltungen pro Stunde		SF = SF ₁ x SF ₂
ore hours Stunden	uniforme uniform gleichmäßige SF ₁	variabile variable variabel SF ₁	a urti with shocks mit Stöße SF ₁	numero number Anzahl	SF ₂	
8	0.8	1.1	1.4	6	1.0	
16	1.0	1.3	1.5	60	1.2	
24	1.2	1.4	1.6	120	1.3	

Fattore di accelerazione delle masse - Mass acceleration factor - Beschleunigungsfaktor der Massen

Classi di carico
Load class
Belastungsklassen

$$k_{(a)} = \frac{J_2}{J_m} + \frac{J_1}{J_m}$$

Number of starts/stops per hour
Anzahl der Schaltungen je Stunde

TIPO DI SERVIZIO - DUTY TYPE - BETRIEBSARTEN
del motore of the motor des Motors

I vari tipi di servizi sono definiti dalle norme CEI EN60034-1/IEC34-1.

Duty types are defined by CEI EN 60034-1 / IEC34-1 Standard.

Die Betriebsarten sind definiert in den Normen CEI EN 60034-1 / IEC34-1.

Servizio continuo S1 - S1 Continuous duty - S1-Dauerbetrieb

Funzionamento a carico costante per un periodo di tempo indefinito (N), comunque sufficiente a raggiungere l'equilibrio termico.

In servizio continuo, possono essere utilizzati i riduttori che nelle tabelle di selezione hanno un fattore di servizio SF1.0 o superiore.

Steady load operation for an indefinite period (N), but long enough to achieve thermal balancing.

On continuous duty, the gearboxes with selection table service factor SF1.0 or higher can be accordingly used.

Betrieb mit konstanter Belastung über eine unbestimmte Zeit (N), ohne dass der thermische Beharrungszustand der Maschine beeinträchtigt wird. Im Dauerbetrieb können Getriebe eingesetzt werden, die in den Auswahltabellen einen Betriebsfaktor SF1.0 oder höher aufweisen.

N = Tempo di lavoro
Operation time
Betriebszeit

c = Carico
Load
Belastung

t = Temperatura
Temperature
Temperatur

T = Tempo
Time
Zeit

Servizio intermittente periodico S3 - S3 Periodic intermittent duty - S3-Aussetzbetriebe

Funzionamento secondo un ciclo (C) comprendente un periodo di tempo a carico costante (N) ed un periodo di tempo di riposo (R). Gli avviamenti non influiscono sulle temperature. Il ciclo (C) di riferimento è di 10 minuti complessivi.

In servizio intermittente periodico, possono essere utilizzati i riduttori che nelle tabelle di selezione hanno un fattore di servizio SF pari al rapporto di intermittenza. Il rapporto di intermittenza viene determinato secondo la formula seguente.

Operation according to cycle (C) including steady load time (N) and rest time (R). Starts/stops do not affect temperature. The reference cycle (C) is up to a total of 10 minutes.

On periodic intermittent duty, the gearboxes with selection table service factor matching the intermittence ratio service factor can be accordingly used.

Intermittence ratio is calculated according the following formula.

Betrieb als Folge (C) gleichartiger Spiele mit konstanter Last während der Zeit (N) und einer folgenden Pause (R). Starten/Anhalten beeinflussen nicht die Temperatur. Für die Zyklusdauer (C) gilt eine Zeit von 10 Minuten.

Im periodischen Intervallbetrieb können Getriebe verwendet werden, die in den Auswahltabellen einen Betriebsfaktor von SF haben, der gleich dem Intermittenzverhältnis ist. Die Intermittenzübersetzung wird nach die folgende Formel bestimmt.

$$\frac{N}{(N+R)} * 100$$

= 60%	FS 1.1
40%	FS 1.2
25%	FS 1.3
15%	FS 1.4

N = Tempo di lavoro
Operation time
Betriebsdauer

R = Tempo di riposo
Rest time
Pause

C = Ciclo di lavoro
Duty cycle
Zyklusdauer

CARICHI RADIALI USCITA

Il carico radiale (F_r) riportato nelle tabelle, deve essere verificato in base alla velocità di uscita, alla posizione di montaggio (A) e al tipo di elemento di trasmissione (B) montato sull'albero di uscita del riduttore tramite i relativi fattori k_L e k_T .

OUTPUT RADIAL LOADS (OHL)

The radial (overhung) load shown in the tables, should be checked according to output speed, mounting position (A) and type of the transmission element (B) fitted on the gearbox output shaft by the appropriate k_L and k_T rating factors.

AUSGANGSRADIALKRÄFTE

Die Radialkräfte in den Tabellen müssen mit entsprechender Abtriebsdrehzahl, der Montageposition (A) und dem Übertragungselement (B) montiert auf der Getriebe-Ausgangswelle durch entsprechendem Faktoren k_L und k_T verglichen werden.

A - Punto di applicazione del carico radiale - Application point of radial load - Anwendung Punkt der Radialbelastung

Il carico radiale è considerato applicato alla mezzzeria dell'albero di uscita.

Altre posizioni originano carichi da correggere con l'appropriato fattore k_L .

Esempi della distanza da spallamento dell'albero:

OHL is considered as applied at the output shaft mid-point.

Other positions origin loads to be adjusted with the appropriate factor k_L .

Examples of the distance from the shaft shoulder:

Die Radialbelastung wird auf der Mitte der Ausgangswelle angelegt.

Andere Positionen erzeugen Lasten, die mit dem entsprechendem Faktor k_L zu korrigieren sind.

Beispiele für den Abstand der Stufenwelle:

k_L	L
1.1	$1/4 * L$
1.0	$1/2 * L$
0.9	$3/4 * L$
0.8	L

B - Elemento della trasmissione - Transmission element - Übertragungselement

F_{r2} - Carico radiale - Radial (overhung) load - Radialkräfte

$$F_{r2} = \frac{2000 * M_2}{D} \times k_L \times k_T$$

CARICHI ASSIALI USCITA

F_{a2} - Il valore del carico assiale

$$F_{a2} = F_{r2} \times 0.2$$

è incluso nel valore dei carichi radiali di catalogo ed è valido sia a trazione che a compressione.

OUTPUT AXIAL LOADS

F_{a2} - Axial load value

$$F_{a2} = F_{r2} \times 0.2$$

is included within the catalogue radial load figure and is valid on both tensile and compressive stress.

AUSGANGSAXIALKRÄFTE

F_{a2} - Der Wert der Axialkräfte

$$F_{a2} = F_{r2} \times 0.2$$

ist in dem Wert der Radialkräfte des Kataloges enthalten und gilt sowohl in Zug und Druck.

MRS, MRT

- Motoriduttori a singolo stadio, con precoppia, a doppio stadio
Potenza: 0.06 kW a 15 kW a 4 poli
Giri uscita: 560 rpm a 0.14 rpm
- Geared motors w/single stage worm, helical/worm, double stage worm
Powers: 0.06 kW to 15 kW, 4 poles
Output speed: 650 rpm to 0.14 rpm
- Einstufig, mit Stirnradvorstufe, Doppelstufig Getriebemotoren
Leistung: 0.06 kW bis 15 kW, 4-polen
Ausgangsgeschwindigkeit: 560 UpM bis 1.4 UpM

FRS, FRT

- Riduttori a singolo stadio, con precoppia, a doppio stadio con flangia motore entrata, albero d'entrata cavo e giunto elastico
Flange motore: IEC 56 a IEC 160 e NEMA 56C a NEMA 210TC
Coppia: 7 Nm [62 in-lb] a 3020 Nm [26730 in-lb]
Rapporti di riduzione: 5:1 a 10000:1
- Gearboxes w/single stage worm, helical/worm, double stage worm and with input motor flange, input quill and flexible coupling
Motor flanges: IEC 56 to IEC 160 and NEMA 56C to NEMA 210TC
Output torque: 7 Nm [62 in-lb] to 26730 Nm [20350 in-lb]
Reduction ratios: 5:1 to 10000:1
- Einstufig, mit Stirnradvorstufe, Doppelstufig mit Motorflansch, Eingangs hohl-welle und Kupplung
Motorflansche: IEC 56 bis IEC 160 u. NEMA 56C bis NEMA 210TC
Ausgangsdrehmoment: 7 Nm [62 in-lb] bis 10000 Nm [20350 in-lb]
Untersetzungsverhältnis: 5:1 bis 10000:1

SRS, SRT

- Riduttori a singolo stadio, con precoppia, a doppio stadio senza flangia motore di entrata, ma con albero entrata cavo e giunto elastico
Coppia: 7 Nm [62 in-lb] a 3020 Nm [26730 in-lb]
Rapporti di riduzione: 5:1 a 10000:1
- Gearboxes w/single stage worm, helical/worm, double stage worm with out input motor flange, but with input hollow shaft and flexible coupling
Output torque: 7 Nm [62 in-lb] to 26730 Nm [20350 in-lb]
Reduction ratios: 5:1 to 10000:1
- Einstufig, mit Stirnradvorstufe, Doppelstufig ohne Motorflansch, aber mit Hohl- eingangswelle und Kupplung
Ausgangsdrehmoment: 7 Nm [62 in-lb] bis 10000 Nm [20350 in-lb]
Untersetzungsverhältnis: 5:1 bis 10000:1

RS, RT

- Riduttori a singolo stadio, con precoppia, a doppio stadio con albero entrata sporgente
Coppia: 7 Nm [62 in-lb] a 3020 Nm [26730 in-lb]
Rapporti di riduzione: 5:1 a 10000:1
- Gearboxes w/single stage worm, helical/worm, double stage worm and input solid shaft
Output torque: 7 Nm [62 in-lb] to 26730 Nm [20350 in-lb]
Reduction ratios: 5:1 to 10000:1
- Einstufig, mit Stirnradvorstufe, Doppelstufig mit Eingangswelle
Ausgangsdrehmoment: 7 Nm [62 in-lb] bis 10000 Nm [20350 in-lb]
Untersetzungsverhältnis: 5:1 bis 10000:1

Reversibilità e Irreversibilità - Back-Driving and Self-Locking - Umkehrbarkeit u. Selbsthemmung

Azionando al contrario un riduttore a vite senza fine con la ruota come organo motore, il rendimento è inferiore a quello di un azionamento con vite motrice e, agendo sui dati di progetto, il rendimento può essere ridotto a zero, ottenendo l'irreversibilità dell'ingranamento.

In quest'azionamento al contrario, l'attrito interno tende a bloccare l'ingranamento e, quanto maggior coppia è applicata alla ruota motrice, tanto più l'attrito d'ingranamento aumenta proporzionalmente ostacolando la rotazione.

L'esempio più ovvio è dato dalla frenatura o dall'abbassamento del carico per inerzia, dove la coppia esterna azionerà al contrario la vite.

Un riduttore a vite senza fine è considerato irreversibile quando l'angolo d'elica è inferiore all'angolo d'attrito (arcotangente del coefficiente d'attrito).

Il contatto sulla dentatura è dinamico anche quando la velocità d'ingranamento è zero, in quanto le vibrazioni su un ingranaggio non rotante possono originare il moto nella zona di contatto.

Si consiglia come fattore di sicurezza la scelta di un angolo d'elica di 3° quale condizione di massima irreversibilità e di 10° quale condizione di minima irreversibilità, secondo la tabella delle relazioni fra angolo d'elica ed irreversibilità.

When back-driving a worm gear set using the worm wheel as input, the efficiency is lower than forward-driving and, by varying the design data, back-drive efficiency can be reduced to zero obtaining a self-locking, or irreversible, gear set.

When back-driving the worm gear, internal friction tends to lock the mesh, and the bigger the applied torque is, the more mesh friction increases proportionally augmenting the lockage at the same time.

The most obvious example is during braking or slowing-down where the inertial load will try to back-drive the worm shaft.

A worm gear is intended as a self-locking unit when the lead angle is less than the friction angle (arc tangent of friction coefficient).

Tooth contact is dynamic even when the mesh velocity is zero, as vibrations in a non-rotating gear set can induce motion in the tooth contact.

To provide a safety factor, a 3° lead angle is recommended for full self-locking condition, and 10° lead angle for poor self-locking condition, according to the table of relations between lead angles and self-locking.

Wird das Schneckengetriebe über die Abtriebswelle angetrieben, ist der Wirkungsgrad des Getriebes schlechter als bei Antrieb über die Eingangswelle. Dabei kann in Abhängigkeit von der Verzahnung der Wirkungsgrad bis Null reduziert sein, was eine auftretende Selbsthemmung bis hin zur vollständigen Blockierung zur Folge hat.

Dieser Fall kann beispielsweise bei Abbremsung oder Senkung einer Last auftreten, wenn die Abtriebswelle durch die Last angetrieben wird.

Ein Schneckengetriebe wird als Selbsthemmend bezeichnet, wenn der Spiralwinkel kleiner ist als der Reibungswinkel (Arkustangens vom Reibungskoeffizient).

Der Verzahnungseingriff ist dynamisch, auch wenn die Eingriffsgeschwindigkeit Null ist, da Vibrationen auf ein nicht drehendes Rad eine Bewegung hervorrufen können.

Empfohlen wird, als Sicherheitsfaktor, die Wahl eines Spiralwinkels von 3° als Bedingung einer maximalen Selbsthemmung und von 10° als Bedingung einer geringen Selbsthemmung, wie aus der folgenden Tabelle ersichtlich wird.

Elica Lead angle Spiralwinkel	Irreversibilità statica	Static self-locking	Statische Selbsthemmung
$\beta > 20^\circ$	Reversibilità piena	Full back-driving	Volle Umkehrbarkeit
$10^\circ < \beta < 20^\circ$	Reversibilità elevata	High back-driving	Hohe Umkehrbarkeit
$5^\circ < \beta < 10^\circ$	Reversibilità buona Irreversibilità scarsa	Good back-driving Poor self-locking	Gute Umkehrbarkeit Schwache Selbsthemmung
$3^\circ < \beta < 5^\circ$	Reversibilità scarsa Irreversibilità buona	Poor back-driving Good self-locking	Schwache Umkehrbarkeit Gute Selbsthemmung
$1^\circ < \beta < 3^\circ$	Irreversibilità piena	Full self-locking	Volle Selbsthemmung

La Direttiva Europea 2006/42/CE-ATEX riguarda non solo gli apparecchi elettrici ma tutte le macchine e gli organi di comando che sono destinati, soli o combinati, ad essere utilizzati in atmosfere potenzialmente esplosive nei territori della Comunità Europea.

I riduttori VARVEL-ATEX sono costruiti con

- carcassa e coperchi in materiale metallico, contenenti gli elementi di trasmissione montati su cuscinetti a sfere o a rulli;
- paraolio in fluoro-elastomero FKM (Viton) sugli alberi di entrata e di uscita;
- quantità di lubrificante idonea per assicurare il funzionamento del progetto;
- viteria sigillata con pasta frena-filetti.

I riduttori VARVEL-ATEX sono identificati nella Direttiva come «componenti», pertanto privati di loro funzione autonoma, ma essenziali per il funzionamento di apparecchi e di sistemi di protezione destinati alla produzione, trasporto, immagazzinamento, misurazione, regolazione e conversione d'energia e trasformazione dei materiali che, per le loro proprie potenzialità d'inflammabilità, rischiano di provocare l'insorgere di un'esplosione.

Specifica Codice Direttiva ATEX

• Gruppo

- I - uso in miniera
- II - uso in industrie di superficie

• Categoria

- 1- esposizione continuata in ambiente possibilmente esplosivo con durata >1000 ore/anno o con frequenti malfunzionamenti
- 2- esposizione occasionale in ambiente possibilmente esplosivo con durata fra 10 e 1000 ore/anno o con saltuari malfunzionamenti
- 3- esposizione poco probabile in ambiente possibilmente esplosivo e se avvenuta, si verifica per un breve periodo con durata inferiore a 10 ore/anno

• Lettere "G" e "D"

- G - presenza di gas
- D - presenza di polveri

• Lettere "c" e "k"

- c - indice di sicurezza di costruzione
- k - indice di sicurezza di immersione in liquido

• IP66 (IP4X Nema)

- IP - International Protection
- 1a cifra (6) - totalmente protetto contro la polvere
- 2a cifra (6) - protetto da ondate

• T_{max} e T_{amb}

- T_{max} - temperatura max della superficie
- T_{amb} - temperatura max dell'ambiente

The European Directive 2006/42/EC-ATEX relates not only to electric devices but to all the machines and driving units destined, alone or combined, to operate in potentially explosive environments within European Community territory.

The gearboxes VARVEL-ATEX are manufactured

- with metallic housings and covers, containing the driving gears fitted on ball or roller bearings;
- FKM-Fluor-elastomer (Viton) oil seals on input and output shafts;
- the needed oil quantity to ensure the unit operation;
- sealed thread screws with sealing paste.

The gearboxes VARVEL-ATEX are identified in the Directive as «components», therefore stripped away any autonomous function, but fundamental to operation of units and protection systems destined to production, transport, storage, measuring, adjusting and conversion of energy and material transformation that because of their own inflammable potentiality, risk to induce an explosion trigger.

ATEX-Directive Code Breakdown

• Group

- I - mining operation
- II - surface industry operation

• Category

- 1- continuous exposure in possibly explosive environment for more than 1000 hrs/year or with frequent malfunctioning
- 2- occasional exposure in possibly explosive environment for 10 to 1000 hrs/year or with sporadic malfunctioning
- 3- not very likely exposure in possibly explosive environment and if happened, not longer than 10 hours/year

• Letters "G" and "D"

- G - gas presence
- D - dust presence

• Letters "c" and "k"

- c - safety indication of construction
- k - safety indication of immersion in liquid

• IP66 (IP4X Nema)

- IP - International Protection
- 1st digit (6) - dust tight protection
- 2nd digit (6) - against powerful water jet protection

• T_{max} and T_{amb}

- T_{max} - surface max. temperature
- T_{amb} - ambient max. temperature

Die Europäische Richtlinie 2006/42/EG-ATEX gilt nicht nur für elektrische Ausrüstungen, sondern auch für alle Arten von Maschinen und Steuerungsteile, allein oder kombiniert, für den Gebrauch in potentiell explosiver Atmosphäre in den Gebieten der Europäischen Gemeinschaft.

Die VARVEL-ATEX Getriebe sind hergestellt mit

- Gehäuse und Deckel in Metall, beinhaltet Getriebe montiert auf Kugel- oder Rollenlager;
- FKM-Fluorelaste (Viton) Dichtungen auf Eingangs- und Ausgangswellen;
- ausreichende Ölmenge, um das Funktionieren des Projekts zu gewährleisten;
- Schrauben sind mit Schraubensicherungspaste abgedichtet.

VARVEL-ATEX Getriebe sind in der Richtlinie als "Komponenten" identifiziert, von daher ihre autonome Funktion, aber wesentlich für den Betrieb von Geräten und Schutzsystemen für die Produktion, Transport, Lagerung, Messung, Regelung und Umwandlung von Energie und Verarbeitung von Materialien, die wegen ihrer eigenen potenzieller Entflammbarkeit, die Auslösung einer Explosion riskieren.

Richtlinie ATEX Kode Erläuterung

• Gruppe

- I - Verwendung in Minen
- II - Verwendung in Oberflächen Branchen

• Kategorien

- 1- kontinuierliche Exposition in möglicher explosiver Umgebung bei Dauer >1000 Stunden/Jahr oder mit häufigen Störungen
- 2- gelegentliche Exposition in möglicher explosiver Umgebung mit Dauer zwischen 10 und 1000 Stunden/Jahr oder mit gelegentlichen Fehlfunktionen
- 3- unwahrscheinliche Exposition, in möglicher explosiver Umgebung und wenn dies eintritt, bei einem kurzen Zeitraum mit Dauer von weniger als 10 Stunden/Jahr

• Buchstaben "G" und "D"

- G - Vorhandensein von Gas
- D - Vorhandensein von Staub

• Buchstaben "c" und "k"

- c - Indiz der Bausicherheit
- k - Indiz der Eintauchen in Flüssigkeit

• IP66 (IP4X Nema)

- IP - International Protection
- 1. Ziffer (6) - Staubdicht
- 2. Ziffer (6) - Schutz gegen starkem Wasser-Strahl

• T_{max} u. T_{amb}

- T_{max} - Maximale Oberflächentemperatur
- T_{amb} - Umgebungstemperatur

Le serie VARVEL RD, RS, RT, RN, RO, RV, RP680 e XA100 sono conformi alle richieste di progetto esatte dal

- Gruppo II,
- Categoria 2 o 3,
- zona 1 e zona 2 per funzionamento in zone con pericolo di esplosione in presenza di gas,
- zona 21 e zona 22 per funzionamento in zone con pericolo di polveri combustibili.

I prodotti VARVEL-ATEX sono marcati

 **II 2 GD ck IP66 CE**
T_{max}=135°C

VARVEL RD, RS, RT, RN, RO, RV, RP680 and XA100 series are conforming with design requirements asked by

- Group II,
- Category 2 or 3,
- zones 1 and 2 for operation in possible hazardous zones in presence of gas,
- zones 21 and 22 for operation in possible hazardous zones in presence of combustible dust.

The VARVEL-ATEX products are marked

 **II 2 GD ck IP66 CE**
T_{max}=135°C

Die Serie VARVEL RD, RS, RT, RN, RO, RV, RP680 u. XA100 sind Übereinstimmung mit die Konstruktionsanforderungen gebeten von

- Gruppe II,
- Kategorie 2 oder 3,
- Zone 1 und Zone 2 für Betrieb in Zonen mit Explosionsgefahr in der Gegenwart von Gas,
- Zone 21 und Zone 22 für Betrieb in Zonen mit Explosionsgefahr in der Gegenwart Staub.

Die Produkte VARVEL-ATEX sind markiert

 **II 2 GD ck IP66 CE**
T_{max}=135°C

Gruppo Group Gruppe	Categoria Category Kategorie	Gas, Vapori, Nebbie Gas, Vapours, Cloud Gas, Dämpfe, Nebel	Zona ↔ ↔ Zone	Polveri Dust Stäube
I (a)	M1 (c) M2 (d)

	2 (d)	G (1)		D (21)
	3 (e)	G (2)		D (22)

Attenzione !

I riduttori VARVEL-ATEX **non sono certificati** per funzionamento nelle aree in **colore grigio**.

- (a) - Miniere
- (b) - Industrie di superficie
- (c) - Livello di protezione: molto elevato
- (d) - Livello di protezione: elevato
- (e) - Livello di protezione: normale
- (0) - Presenza continua di gas
- (1) - Presenza discontinua di gas
- (2) - Presenza occasionale di gas
- (20) - Presenza continua di polveri
- (21) - Presenza discontinua di polveri
- (22) - Presenza occasionale di polveri

Warning !

The VARVEL-ATEX gearboxes **are not certified** for operation in **shaded areas**.

- (a) - Mines
- (b) - Surface industries
- (c) - Protection level: very high
- (d) - Protection level: high
- (e) - Protection level: normal
- (0) - Continuous presence of gas
- (1) - Discontinuous presence of gas
- (2) - Occasional presence of gas
- (20) - Continuous presence of dust
- (21) - Discontinuous presence of dust
- (22) - Occasional presence of dust

Vorsicht !

Die Getriebe VARVEL-ATEX sind für den Anbau in die **Graufarbezone nicht zertifiziert**.

- (a) - Bergwerke
- (b) - Oberfläche-Industrien
- (c) - Schutzklasse: sehr hoch
- (d) - Schutzklasse: hoch
- (e) - Schutzklasse: normal
- (0) - ständige Gegenwart von gas
- (1) - nicht ständige Gegenwart von gas
- (2) - gelegentliche Gegenwart von gas
- (20) - ständige Gegenwart von Stäube
- (21) - nicht ständige Gegenwart von Stäube
- (22) - gelegentliche Gegenwart von Stäube

Estratto delle ISTRUZIONI D'USO E MANUTENZIONE (manuale completo su www.varvel.com)

Ai sensi della Direttiva Macchine 2006/42/CE e relativa Linea Guida, i riduttori e i variatori di velocità sono considerati "elementi separati di macchine che non hanno un'applicazione specifica e che sono destinati ad essere incorporati nella macchina. La macchina completa dotata di questi componenti deve soddisfare i requisiti essenziali pertinenti di sicurezza e tutela della salute" della citata Direttiva.

Installazione

Accertarsi che il gruppo da installare abbia le caratteristiche atte a svolgere la funzione richiesta e che la posizione di montaggio sia coerente con quanto ordinato. Tali caratteristiche sono deducibili dalla targhetta d'identificazione apposta sul riduttore. Effettuare la verifica della stabilità del montaggio affinché non si verifichino vibrazioni o sovraccarichi durante il funzionamento.

Funzionamento

Il riduttore può essere collegato per rotazione oraria o antioraria. Arrestare immediatamente il riduttore in caso di funzionamento difettoso o di rumorosità anomala, rimuovere il difetto o ritornare l'apparecchio alla fabbrica per un'adeguata revisione. Se la parte difettosa non è sostituita, anche altri componenti possono essere danneggiati con conseguenti ulteriori danneggiamenti e più scarsa possibilità di risalire alle cause.

Manutenzione

Sebbene i gruppi siano provati con funzionamento senza carico prima della spedizione, è consigliabile non usarli a carico massimo durante le prime 20-30 ore di funzionamento affinché le parti interne possano adattarsi reciprocamente. I riduttori sono spediti già riempiti con olio sintetico a lunga durata e, se occorre sostituire o rabboccare il lubrificante, non mescolare oli a base sintetica con oli a base minerale.

Movimentazione

In caso di sollevamenti con paranco, utilizzare posizioni di aggancio sulla struttura della carcassa, golfari ove esistenti, fori dei piedi o sulle flange, evitando tutte le parti mobili.

Verniciatura

Qualora il gruppo subisca una verniciatura successiva, è necessario proteggere accuratamente gli anelli di tenuta, i piani di accoppiamento e gli alberi sporgenti.

Conservazione prolungata a magazzino

Per permanenze maggiori di tre mesi, è consigliata l'applicazione di antiossidanti su alberi esterni e piani lavorati, e di grasso protettivo sui labbri dei paraolio.

Gestione Ambientale del prodotto

In conformità alla Certificazione Ambientale ISO 14001, sono suggerite le seguenti indicazioni per lo smaltimento del nostro prodotto:

- i componenti del gruppo che vengono rottamati debbono essere consegnati a centri di raccolta autorizzati per i materiali metallici;
- gli oli ed i lubrificanti raccolti dal gruppo devono essere smaltiti consegnandoli ai Consorzi Oli esausti;
- gli imballi a corredo dei gruppi (pallet, cartone, carta, plastica, ecc..) vanno avviati per quanto più possibile al recupero/riciclo, consegnandoli a ditte autorizzate per le singole classi di rifiuto.

Abstract of OPERATION & MAINTENANCE INSTRUCTIONS (complete manual on www.varvel.com)

Under the terms of the Machine Directive 2006/42/EC and relevant Guidelines, the speed gearboxes and variators are considered as "machines' separate elements not having a specific application and meant for being incorporated onto the machine. The complete machine and equipped with such components must comply with the essential and relevant requisites for safety and health preservation" of the mentioned Directive.

Installation

Check if the unit to be installed, is properly selected to perform the required function and that its mounting position complies with the order. The nameplate reports such information. Check mounting stability to ensure the unit runs without vibrations or overloads.

Running

The unit may be connected for clockwise or counter-clockwise rotation.

The unit must be stopped as soon as defective running or unexpected noise occur, remove the faulty part or return the unit to the factory for checking.

If the faulty part is not replaced, other parts can also be affected, causing more severe damage and making the identification of initial cause more difficult.

Maintenance

Although the units are no-load run tested in the factory before despatch, it is recommended not to run them at maximum load for the first 20-30 running hours to allow the proper running in.

The gearboxes are delivered already filled with long-life synthetic oil and, in case of replacement or topping, do not mix with mineral lubricants.

Handling

When hoisting, use relevant housing locations or eyebolts if provided, or foot or flange holes. Never hoist on any moving part.

Painting

Carefully protect oil seals, coupling faces and shafts when units are re-painted.

Long-term storage

For storages longer than three months, apply anti-oxidants onto shafts and machined surfaces, and protective grease on oil seal lips.

Product's Environmental Management

In conformity with Environmental Certification ISO 14001, we recommend the following to dispose of our products:

- scraped components of the units to be delivered to authorized centres for metal object collection;
- oils and lubricants drained from the units to be delivered to Exhausted Oil Unions;
- packages (pallets, carton boxes, paper, plastic, etc..) to lead into regeneration/recycling circuits as far as possible, by delivering separate waste classes to authorized companies.

Zusammenfassung der BETRIEBS- u. WAR-TUNGSANWEISUNGEN (vollständiges Handbuch auf www.varvel.com)

Gemäß der Maschinenrichtlinie 2006/42/EG und der zugehörigen Richtlinie gelten Getriebe und Verstellgetriebe als "separate Elemente von Maschinen, die keine spezifische Anwendung haben und die in der Maschine eingebaut werden sollen. Die gesamte Maschine, die mit diesen Komponenten ausgerüstet ist, muss den einschlägigen grundlegenden Sicherheits- und Gesundheitsanforderungen der vorgenannten Richtlinie entsprechen.

Aufstellung

Vor der Aufstellung ist zu prüfen, dass die Antriebseinheit in Bezug auf die Betriebsbedingungen richtig ausgewählt wurde und die Einbaulage mit der Bestellung übereinstimmt. Angaben hierüber sind auf dem Typenschild zu finden. Die Stützkonstruktion für die Getriebe ist so stabil auszuführen, dass keine Schwingungen oder Überlastungen auftreten, eventuell sind elastische Kupplungen oder Drehmomentbegrenzer zu verwenden.

Inbetriebnahme

Die Antriebseinheit kann in beiden Drehrichtungen eingesetzt werden. Die Einheit muss sofort angehalten werden, wenn ein unzulässiger Lauf oder unerwartete Geräusche auftreten.

Das fehlerhafte Teil ist zu ersetzen oder die Einheit ist zur Überprüfung einzuschicken, Falls das fehlerhafte Teil nicht ersetzt wird, kann dies zu weiteren Schäden an anderen Bauteilen führen, was eine Feststellung der Ursachen sehr schwierig machen kann.

Wartung

Obwohl die Einheiten vor der Auslieferung im Leerlauf getestet wurden, ist es ratsam sie in den ersten 20-30 Stunden nicht mit Volllast zu betreiben, um ein einwandfreies Einlaufen zu gewährleisten. Die Einheiten werden entsprechend den Angaben auf dem Typenschild mit synthetischem Schmierstoff Lebensdauer geschmiert ausgeliefert. Bei einem eventuellen Ölwechsel oder Nachfüllen darf der Schmierstoff nicht mit Mineralöl vermischt werden.

Handhabung und Transport

Beim Heben und Transport ist auf standsichere Lage und sorgfältige Befestigung geeigneter Hebevorrichtungen zu achten, Bewegliche Teile dürfen nicht zum Anheben benutzt werden.

Anstrich

Beim Erneuern oder dem zusätzlichen Aufbringen eines Anstriches sind die Dichtungen, Kupplungssitze und Wellen sorgfältig zu schützen.

Langzeitlagerung

Die Einlagerung der Einheiten muss trocken und staubfrei erfolgen. Bei einer Einlagerungszeit über 3 Monate sind bearbeitete Flächen und Wellen mit Rostschutzmitteln zu besprühen, Dichtlippen sind mit Fett zu schützen.

Entsorgung

In Übereinstimmung mit ISO 14001 weisen wir darauf hin, im Falle des Verschrottens die einzelnen Metallteile getrennt zu behandeln und Schmiermittel bei den befugten Stellen zu entsorgen. Verpackungen sollten soweit wie möglich wieder verwendet werden.
